Abstract (Basic): DE 3625418 A

A container (1) for nail varnish etc. has an attached brush (19) for applying the varnish to the finger nails. The container is cylindrical, with an extension (3) to which the brush is attached. The varnish flows out of the container into the extension (3) and onto the brush bristles.

The outflow from the container is controlled by a spring-loaded valve (5) which is actuated by a rod (21). The latter passes through the length of the container to a spring-loaded pushbutton, fitted to the opposite end of the container.

ADVANTAGE - Small number of components in a low-cost design.
